

NetSuite vs Sage Intacct

We're comparing two leading cloud platforms for modern finance teams. Sage Intacct is known for financial management. NetSuite extends further, unifying finance, inventory and operations in a single system.

Check out the side-by-side comparison to compare all the specs of NetSuite and Sage Intacct.

		
Platform type	ERP and advanced financial management platform	Cloud financial management software
True cloud	100% multi-tenant cloud, running on Oracle Cloud Infrastructure	True multi-tenant SaaS, hosted on AWS
Global reach	Operates in 220+ countries, 27 languages, 190 currencies	Available in primarily English speaking regions such as US, UK and ANZ - is expanding
Scope & capabilities	Finance, inventory, manufacturing, CRM, projects and commerce in one system	Core financials with inventory and project capabilities. Other capabilities via integrations
Multi-subsidiary management	Very strong global capability with native multi-company, multi-currency and multi-tax support	Strong multi-entity consolidation and global accounting, though the choice between three consolidation engines adds complexity
Operational depth	Full ERP across finance and operations on one platform	Finance-first platform with partial operation support, with the rest handled through integrations
Industry best practices	Prebuilt workflows and leading practices across industries	Finance-focused best practices and configurations
User access & limits	Flexible user licensing across roles	Flexible user licensing across roles
Role-based access	Granular, customisable roles supporting segregation of duties	Role-based permissions with finance focus
Market segment	Growing mid-market to enterprise businesses	Mid-market, finance-led organisations
Hosting	Hosted on Oracle Cloud Infrastructure (ANZ data centres)	Hosted on AWS with regional availability
Partner app store	SuiteApp marketplace with 700+ integrations	Marketplace with 350+ integrations
AI & automation	Embedded AI across workflows, reporting and planning with strong AI roadmap across finance and operations	AI capabilities focused on finance processes, including anomaly detection and close support
Upgrades	Two automatic upgrades yearly	Quarterly automatic updates
Ease of customisation	Extensive customisation tools, including SuiteCloud platform	Configuration-led customisation with platform services
Development	Native scripting engine for advanced development	API-led development and platform extensions
Business intelligence & data warehousing	Built in analytics, dimensional reporting and data warehouse	Strong financial analytics and dimensional reporting
Dashboards & KPIs	Customisable real-time dashboards with drill down	Finance-focused dashboards with drill-down
Native customisable reporting	Enterprise class financial planning, budgeting, forecasting, financial close and narrative reporting	Simple financial planning that may require Sage Reporting services
Deployment	Requires partners to implement with rapid deployment options	Partner-led. Implementation timelines vary by scope and complexity
Platform expansion	Expand across the business without replatforming	Extend finance, broader capability via integrations
Multi-book accounting	Multiple accounting books within one system	Flexible multi-book and dimensional accounting
Subscription billing	Supports complex billing models and revenue recognition	Advanced billing and revenue management
Inventory management	Native inventory, fulfilment and stock management	Basic inventory, advanced capabilities via add-ons
Warehouse management	Native WMS with picking, tracking and automation	Available via integrations and extensions
Support	Global support with 24x7 coverage	Business-hours support, partner-led in ANZ
